

AMI Deployment Project

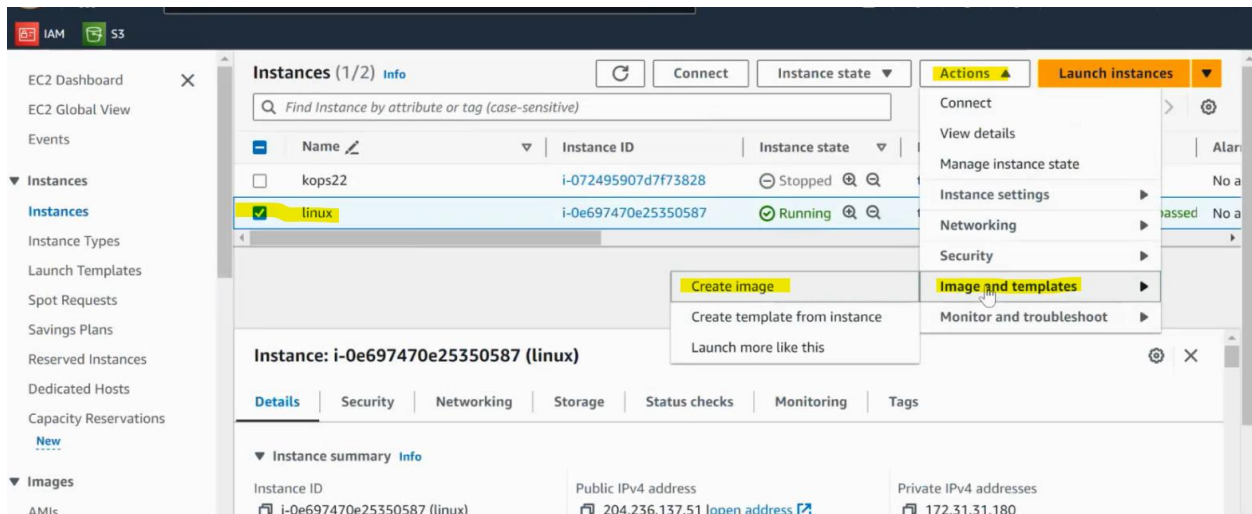

The AMI Deployment Project involves creating and managing Amazon Machine Images (AMIs) to facilitate the deployment of instances in a cloud environment. This project encompasses the entire lifecycle of volume management, including the creation of instances, attaching additional volumes, and utilizing snapshots for data protection and recovery.

=====

How to create an AMI

Create an instance or use an existing instance and select that instance

Go to Actions => Image and templates => create image

It'll navigate here

Give Image name and description (optional)

EC2 > Instances > i-Oe697470e25350587 > Create image

Create image [Info](#)

An image (also referred to as an AMI) defines the programs and settings that are applied when you launch an EC2 instance. You can create an image from the configuration

Instance ID
i-Oe697470e25350587 (linux)

Image name
 I
Maximum 127 characters. Can't be modified after creation.

Image description - optional

Maximum 255 characters

If you want, you can add extra volume and select deletion on termination otherwise you have to raise query to customer care to delete it

Storage type	Device	Snapshot	Size	Volume type	IOPS	Throughput	Delete on termination	Encryp
EBS	/dev/...	Create new snapshot fr...	3	EBS General Purpose S...	3000	125	☐ Enable	Ena
EBS	/dev/...	Create new snapshot fr...	8	EBS General Purpose S...	100		☒ Enable	Ena

[Add volume](#)

Click on create image

with the resource.

more tags.

Cancel [Create image](#)

Note : you can delete the existing instance only when the created image is in available state.

After that image turned into available state, you can create instance with that AMI

Click on launch instance give a name and got AMI => My AMIs

▼ Application and OS Images (Amazon Machine Image) [Info](#)

An AMI is a template that contains the software configuration (operating system, application server, and applications) required to launch your instance. Search or Browse for AMIs if you don't see what you are looking for below
